 Period for Reply

## A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 17 October 2003.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Claims 1, 27 and 56 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Kellogg et al.

The Kellogg et al reference teaches an apparatus and process of moving microfluids. Micro channels are formed in a substrate. There are multiple channels and the channels can be connected to each other. The fluid is placed in one channel and then the substrate is spun to create centrifugal forces, which can move the fluids to another channel, note, entire reference and specifically the examples.

The following is a quotation of 35 U.S.C. 103(a), which forms the basis for all obviousness rejections, set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Art Unit: 1765

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 2 to 9 and 28 to 35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kellogg.

The Kellogg reference is relied on for the same reasons as stated, *supra*, and differs from the instant claims in the speed and force of rotation. However, in the absence of unexpected results, it would have been obvious to one of ordinary skill in the art to determine through routine experimentation the optimum, operable speed and force of rotation in the Kellogg reference in order to move the fluid to the desired microchannel.

Claims 10 to 26, 36 to 55 and 57 to 60 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kellogg.

The Kellogg reference is relied on for the same reasons as stated, *supra*, and differs from the instant claims in the sizes of the disc and amount moved. However, in the absence of unexpected results, it would have been obvious to one of ordinary skill in the art to determine through routine experimentation the optimum, operable size of the disc in the Kellogg reference in order to spin and move the desired amounts of fluid to a microchannel.

Examiner's Remarks

The remaining references are merely cited of interest as showing the state of the art.

The terminal disclaimer of October 17, 2003 has been found to be proper. Since, the terminal disclaimer of October 1, 2003 was not proper it was never entered into the application. Thus, the petition is moot.
